#### **DETAILED ACTION**

1. Applicant's amendment and accompanying remarks filed February 6, 2006 have been acknowledged.

- 2. Examiner acknowledges amended claims 1 and 30-33.
- 3. The rejection of claims 30-33 under 35 U.S.C. 112, second paragraph is withdrawn due to applicant's amended claims 30-33.
- 4. The rejection of claims 1 and 39 under 35 U.S.C. 102(b) as being anticipated by Katashima et al., U.S. Patent Number 5,968,871 is withdrawn due to applicant's amended claims 1 and 39.
- 5. The rejection of claims 1-4 and 15-45 under 35 U.S.C. 103(a) as being unpatentable over Majumdar et al., U.S. Patent Number 6,566,033 in view of Katashima et al., U.S. Patent Number 5,968,871 is withdrawn due to applicant's amended claim 1 and argument.
- 6. The rejection of claims 1-45 under the judicially created doctrine of obviousness-type double patenting as being unpatentable over co-pending application 10/668,386 is withdrawn due to applicant's submission of the terminal disclaimer.

### Claim Rejections - 35 USC § 112

- 7. The following is a quotation of the second paragraph of 35 U.S.C. 112:
  - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 8. Claims 6-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 6 is rendered indefinite because it is dependent upon claim 5. Claim 5 has been cancelled.

## Claim Rejections - 35 USC § 102

9. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 10. Claims 1-4 and 30-41 are rejected under 35 U.S.C. 102(e) as being anticipated by Kaminsky et al., U.S. Pre Grant Publication 2004/0213597.

The applied reference has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Kaminsky discloses an article comprising a base sheet, a transparent conductive material and a transparent protective material (see paragraph 0017). Additionally, the reference disclose that the article may be used in combination with imaging layers such as ink jet printed images (see paragraph 0018). The reference also discloses an electrically conductive sheet material that is patterned and transparent (see paragraph 0018). Paragraph 0026 of the reference discloses that the conductive material comprises a conductive polymer that have a resistivity of less than 5000

ohm meter. Paragraph 0060 of the reference discloses that the conduits preferably comprise thermoplastic polymers such as polyolefins and polyethers. Also, the conduits provide precision pathways for conducting electricity from an origination point to the destination. Paragraph 0057 of the reference discloses a synthetic overcoat of silver halide imaging layers.

## Double Patenting

11. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned

with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-4, 6-18 and 23-41 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-9, 41-57, 59-61 and 66-69 of copending Application No. 10/839,935. Although the conflicting claims are not identical, they are not patentably distinct from each other because both applications recite an article comprising a substrate having thereon at least one antistatic layer, wherein said antistatic layer comprises at least one conductive material, wherein said antistatic layer comprises areas of patterned coverage, wherein said patterned coverage comprises a graphic design, and the patterned coverage comprises as continuous interconnected conductive pathway. The copending application recites a display whereas the instant application recites an article. An article is generic and encompasses a display. Therefore, it would have been obvious to one of ordinary skill in the art to recognize that a display is an article.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

12. Claims 19-22 and 42-45 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the

Art Unit: 1774

base claim and any intervening claims. The prior art does not provide for the recited article, further including the substrate having a core that has adhered thereto at least one flange layer.

13. Claims 6-29 would be allowable if rewritten in independent form including all of the limitations of the base claim and submission of the terminal disclaimer. The prior art does not provide for the recited article, further including the patterned coverage comprising areas of coverage and areas without coverage and the graphic design is one of at least one line, one dot, grid, character or logo. Additionally, the prior art does not provide for the recited article further including a substrate comprising an opaque support and oriented laminates.

#### Response to Arguments

14. Applicant's arguments with respect to the instant claims have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communication from the examiner should be directed to Camie S. Thompson whose telephone number is (571) 272-1530. The examiner can normally be reached on Monday through Friday from 7:30 am to 4:00 pm. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rena L Dye, can be reached at (571) 272-3186. The fax phone number for the Group is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
